

## ADVANCED FILTERING IN THE BLACKBOARD GRADEBOOK

With the August release of Blackboard, instructors can filter their gradebook view by multiple variables like users, groups, items, and categories. The filters applied can also be bookmarked and accessed later.

Besides seeing the filters in the gradebook, instructors will be able to move back and forth among the students' submissions that are included in the selected filters.

### IMPACT

Advanced filtering it promotes an easier grading process for instructors. Gradebook filters will make segmenting the grading process of large courses easier, providing a more dynamic experience where multiple filters can be used on demand.
